

SNAP Application Checklist.

- **Application for Interconnection of SNAP or SNAP Plus Generation**
- **W-9**
- **Power Purchase and Interconnection Agreement, including Appendix I and Appendix II**
- **Electrical Load Data and Electrical Print form**
- **Applicable SNAP "One-Line" form**
(choose one – or, more)
 - Traditional SNAP One-Line
 - Option 1 One-Line, SNAP Plus (net metering)
 - Option 2 One-Line, SNAP Plus (net metering)

It is required that before prospective SNAP producers purchase and install a renewable energy system, a completed SNAP application be submitted for review and approval.

After a completed and signed application is submitted, the following steps happen:

- A GVEA field representative usually visits the site based on the New Service Order form.
- A GVEA engineer then inspects the submitted project system details and the one-line. After approval of a proposal, installation can commence
- When the system is completed, the producer calls construction services for a final inspection. After the final inspection, paperwork is transferred to a line-crew, which comes out and connects the system.

The SNAP \$10 account service charge, or connection fee, must be paid before connection.

Last, SNAP producer (SNAP traditional or SNAP-Plus net metering) agrees to contact GVEA SNAP administrator on any future changes to this SNAP system, especially additional capacity, for tracking purpose. Thank you.
